

# Path to Image Magick

The path to convert is : `/usr/local/bin/convert` or `/usr/bin/convert` or `/opt/cloudlinux/bin/convert`

The path to identify is : `/usr/local/bin/identify` or `/usr/bin/identify` or `/opt/cloudlinux/bin/identify`

The path to mogrify is : `/usr/local/bin/mogrify` or `/usr/bin/mogrify` or `/opt/cloudlinux/bin/mogrify`

in most cases. If you have commandline access use this to determine where it lives:

```
which convert
```

or

```
whereis convert
```

and you will see the path to the current running imagemagick binaries.
