

Failed Domain transfer to InstaPro.net

If you are trying to save money on your annual domain renewal, and have made a transfer to [InstaPro.net](#) but it failed, read below....

In many cases a domain transfer will fail.

The 2 most common reasons for this are:

1. The administrative email address, first and or last name on the domain being transferred doesn't match the details you have entered at InstaPro.

To fix this, make sure these fields all are in sync, then login to your InstaPro account and find the option to re-initiate the transfer. If you have questions on how to do this, contact InstaPro @ (480) 624-2500.

2. The current registrar has placed a transfer lock on your Domain. To get this removed, you need to contact the old (or "loosing") registrar and advise them that you need the lock removed so you can complete the transfer.

Once this has been done, log back into your InstaPro account and find the option to re-initiate the transfer. If you have questions on how to do this, use the support link on the [InstaPro site](#).
