Change emails per hour limit on a Dedicated Server/VDS

If you have a dedicated server or a VDS, you might want to change emails per hour limit in case you need to send newsletters to many recipients. By default this number is set to 250 emails/hour, so in case one of your accounts is hacked - it can't send tons of SPAM. So, once you decide to change this limit, please be careful.

> We recommend keeping some sort of limit to help protect your server, and we advise against setting this to unlimited.

Two values should be changed:

1. Go to WHM -> Tweak settings -> click on Mail Tab -> find "Max hourly emails per domain" and set number you need.
2. Go to WHM -> ConfigServer Security&Firewall -> click on "Firewall Configuration" button -> press "CTRL+F" and find "LF_SCRIPT_LIMIT"

Set the values that you need.

That's all.

If you have shared or reseller hosting package, limits can be found here: Email Limits - How many emails per hour?
